BY

G. G. BUCHANAN, M.B., Ch.B., D.P.H.

Medical Officer of Health for the Area

Reports of Sanitary Inspectors appended

Public Health Department The Friary Appleton Gate NEWARK

August, 1948

To the Mayor and Corporation of the Borough of Newark

Sir, Madam and Gentlemen,

I have the honour to present to you my eighth Annual Report on the sanitary circumstances, health and vital statistics of the Borough for the year 1947.

In accordance with the Ministry of Health Circular 13/47 the report is again an Ordinary Report and is abbreviated as in previous years.

I had hoped in this year of peace 1947 to be able to report advancements in health provisions, housing conditions, and other Public Health matters, but through no fault of the Council or the Department I have little to say that was not in my introduction last year.

Shortage of nursing staff, both health visiting and at the Isolation Hospital, has been one of the anxieties throughout the year and the Matron at the hospital must be congratulated on the way she has managed to keep the wards available. She also had to contend with lack of domestic staff with any experience.

Much administration work was necessary in letting the County Council have information on which to base their proposals under the National Health Service Act, 1946 which on 5th July, 1948 transfers Maternity and Child Welfare, Ambulance, and Immunisation services from the Borough to the County Council. The proposals submitted indicates that administration of the first two will in future be on a County basis carried out at the County Health Department, but local administration of Immunisation will remain, as this is closely bound up with local infectious disease supervision. Vaccination which becomes voluntary is allied to Immunisation and will also be administered to a large extent locally.

Details of the cases of Anterior Poliomyelitis which occurred between August and November are set out. The epidemic was on a national scale and the Borough was not affected any more heavily than was to be expected.

In the beginning of the year the Borough had its share of flooding. Although very inconvenient and destructive to those affected, it was not on such a large scale as in some of the rural villages. The Department gave what help it could in helping with the cleansing and disinfection of flooded dwellings.

I wish to thank the Members of the Council for their ever ready assistance and continued interest in Public Health matters and to thank my colleagues in other Departments for their help and advice during the year.

I also record my gratitude to the members of the Department Staff who have all worked hard and have been always willing to combine and ensure jobs being done. Mr. Cree, the driver of the fever ambulance, I would specially mention for his readiness to undertake the several journeys to out-County Hospitals with cases of Infantile Paralysis — frequently after dark and under difficult weather conditions.

I am,

Your obedient servant

G. G. BUCHANAN

Post-script. Since drafting this introduction, Mr. Cree has unfortunately died.

(Note —Figures given in brackets are corresponding figures for England and Wales).

Notes on Vital Statistics

Births. The number of births, 448, is only three below the 1946 record. The first few months gave every indication of the number exceeding that of 1946 but during the second half of the year the monthly figures dropped. Unfortunately the stillbirths increased from 8 to 14, only one of these being illegitimate.

Deaths. The death rate has increased from 10.6 to 11.7. The number of deaths from diseases of heart and circulation (the main cause) increased from 70 to 102. The number from cancer decreased from 36 to 31.

The infantile mortality rate was 58 per 1,000 births. This was an increase of 19 — a bad feature. The causes of death of these infants were:-

Prematurity				 9
Gastro enteritis				 6
Respiratory disease				 4
Haemorrhagic jaun	dice	٠.		 3
Convulsions			• •	 2
Spina bifida				 1
Cerebral Haemorrh	age		4 4	 1
				26

Sixteen of the deaths occurred in hospital, including five of the premature

There was no death of a mother in or in consequence of child birth.

GENERAL PROVISION OF HEALTH SERVICES FOR THE AREA

Clinics

(a) Under the control of Newark Borough Council:-

Maternity and Child Welfare Centre Monday and Thursday, 2 to 4 p.m.

Ante-Natal Clinic

Tuesday (Fortnightly), 2 to 4 p.m.

Dental Clinic

Expectant mothers and pre-school children—Friday 2 p.m. (arranged as necessary.)

(b) Under the control of Nottinghamshire County Council:—

School Clinic

Monday, Wednesday and Friday, 9 to 10.30 a.m.

Dental Clinic

School children—Tuesday, Thursday and Friday, 9.30 a.m. & 2 p.m. Wednesday 9.30 a.m.

The above are held at the Public Health Department, Appleton Gate, Newark.

Chest Clinic, 11 Cartergate Tuesday, 10 a.m. to 12 noon.

(c) Under the Control of Newark and District Cripples Guild:—
Orthopaedic Clinic

Monday, Wednesday and Friday, 10 a.m. to 12.30 p.m 4th Wednesday each month, 2 to 4 p.m.

The Orthopaedic Surgeon attends on the 4th Wednesday afternoon in each month. The Clinic is held in the Public Health Department, The Friary, Appleton Gate, Newark.

Ambulance Service

From 1st January to 31st March the accident ambulance service was maintained by the Borough Police but on 1st April this force was merged with the County force and the ambulance service was then transferred to the Public Health Department. A contract was entered into with a firm of taxi owners, under which the firm engaged sufficient extra staff to man one ambulance and also arranged for additional staff to be available should the reserve vehicle be called out. This arrangement works well and an adequate service is maintained. The administrative work and general supervision is carried out in the Department.

The record of journeys is :-

A 11 0					
Accident Cases			• •		98
Illness and transfer	-				230
Maternity		• •			29
Public Assistance	• •	• •	• •		23
				_	
		TO	TAL		380

The number of miles travelled was 4,861.

The cost of running the service from 1st April, 1947 to 31st December, 1947 was £1,537.

The ambulance for the transport of infectious cases was maintained by the Public Health Department as in previous years.

This ambulance made 166 journeys and travelled 3,403 miles.

A 5-cwt. van has been ordered, part use of which will be for the transport of infected bedding and other articles for disinfection.

Maternity and Child Welfare

The following tables show the work of the Department in connection with the care of pre-school children and expectant mothers:

Home Visiting	1947	1946
Visits paid by the Health Visitor numbered	826	903
(a) To expectant mothers	50	62
(b) To children under 1 year of age	373	452
(c) To children between 1 and 5 years	403	389
(d) In connection with Infectious Disease	15	12
(e) In connection with Child Life Protection Act	12	11
Ante-Natal Clinic Attendances:		
Ante-natal mothers New attendances	89	108
Total attendances		388
Post-natal mothers Attendances	31	29
Child Welfare Centre		
Attendance by children under 1 year of age	5855	5015
Attendance by children between 1 and 5 years	2055	2483
Number of individuals attending for the first time	369	346
Medical Officer's examinations	855	857
Comparison of attendances at the centre in 1947		
previous years indicates the use now being made of thi	S Service	ce

previous years indicates the use now being made of this service:-

1940	 4,638	1944	 7,926
1941	 5,239		7,189
1942	 5,834	1946	7,498
1943	 6,533	1947	7,910

Dental Clinic

Sessions were still arranged as and when necessary until the end of 1947, the work being undertaken by a part-time Dental Practitioner:

			1947	1946
Number of Sessions	 • •	• •	 12	16
Attendances	 		 71	113

Maternity Beds

The two beds reserved in Newark Maternity Wing have been fully utilised during the year. The County Council Maternity Beds have been used to a limited extent. Maternity cases were sent to outside Institutions only when the beds at the Wing were already booked up but their availability was greatly appreciated on the occasions when admissions to hospital were necessary and our reserved beds were already booked.

The Staff at the Wing continued to be co-operative, and emergency cases were always admitted without delay.

The number of cases admitted to hospital through the Council's scheme was :-

				1947
Newark Maternity Wing				37
County Maternity Beds			• •	3
				40
The reasons for institutional	al conf	inement	ts wer	e :-
Complications				5
Unsuitable Home Conditio	ns			35
				40

The predominance of admissions on account of unsuitable home conditions was notable. One of the main causes of unsuitability was the fact that the expectant mother was in rooms, or only sharing a house, and a separate bedroom was not available. Another was inability to obtain any domestic help during the lying-in period.

Home and Domestic Help

Endeavour to appoint home and domestic helps continued throughout the year without success. It would appear that in this area there are other more attractive occupations for unmarried women, and presumably married women who have to do their own housework have already enough worry and work in their own home.

Day Nursery

The places in the nursery were fully utilised in 1947. Appeals for married women to return to industry were made by the Government and in this area the Council's Nursery was the only nursery or creche available for the admission of children during working hours.

The following table shows the monthly attendances compared with 1946:-

						1947	1946
January .		• •				747	518
February		• •				390	443
March .						464	606
April .	•	• •		• •		507	563
May .		• •				672	707
June .		• •		• •		627	548
July August :	•	• •		• •		803	1220
September						784	590
October .	•	• •	• •	• •		707	720
November		• •	• •		• •	671	767
December			• •	• •		609	639

Some anxiety was felt during the period when cases of infantile paralysis were occurring in the district and close watch was kept to ensure exclusion of any possible contacts. Fortunately no children in attendance could be considered as contacts of any known case and no child in attendance developed the disease.

Illegitimate Children

The arrangement outlined in previous reports, indicating cooperation with the County Council Almoner Services, was continued during 1947.

Premature Infants

During the year 25 premature births were reported. This number included 3 sets of twins. Fourteen births took place in hospital and eleven at home. Death took place within 24 hours of 4 premature infants, and five others within four weeks of birth.

Infectious Diseases

The major feature of infectious diseases occurring within the Borough in 1947 was the outbreak of Anterior Poliomyelitis (Infantile Paralysis) which commenced in August. The first case was a child of 3 months of age. Eight cases were reported between 6th August and 18th November with a final diagnosis being confirmed. All cases were removed to hospital.

The following are details of the cases:-

	Male or			Date of		
	Female	Age	Hospital	9	and Dis.	Result
1.	M	3/12	Derby Iso.	9/8/47	1/9/47 to Harlow Wood Orth. Hosp.	
2.	M.	8	do.	12/9/47	1/10/47	No Paralysis.
3.	M.	15	do.	22/9/47	10/10/47	do.
4.	F.	11	do.	1/11/47	8/12/47 to Harlow Wood Orth. Hosp.	Paralysis arm.
5.	Μ.	$2\frac{1}{2}$	do.	3/11/47	2/12/47	Sl. squint one eye.
6.	M.	2	do.	11/11/47	2/12/47	No Paraly- sis.
7.	М.	32	Forest Fever Hospital, Mansfield.	18/11/47	9/12/47	Doubtful case.
8.	Μ.	19	Military Hospital.	23/8/47	N/K.	N/K.

Of the eight cases four were of the type where no actual paralysis developed. Transfer to Harlow Wood Orthopaedic Hospital was arranged for two cases, one with partial paralysis of arm and one with partial paralysis of hand. The former was transferred to another area before completion of treatment, and the latter, though much improved, is still having treatment at the Cripples' Guild Clinic. One case developed slight squint in one eye which has completely cleared. One of the cases was a non-civilian and was removed to a military hospital.

The number of cases of Scarlet Fever notified during the year was 40. This is the highest number during the past ten years. All the cases were of relatively mild type.

Fifteen notifications of Pulmonary Tuberculosis is an increase of three over last year's low record, but the table of infectious diseases indicates that it is still well below the average for the preceding years. The number of cases of Non-Pulmonary Tuberculosis (2) is a low record.

The results of immunisation against diphtheria is again apparent, there being no case notified during the year. The number of children who received the necessary injections under the Council's scheme was:-

 Under 5 years of age
 ...
 239

 5 to 14 years of age
 ...
 52

 291

In addition 278 children were given secondary or reinforcing injections. A number were immunised by their own medical practitioners.

The number of parents refusing immunisation for their children before they enter school is still too large. Diphtheria can attack preschool children with disastrous results and yet propaganda and personal interviews by Health Visitors and the Medical Officer fail to get parents to realise the benefit, in fact the necessity, of immunisation. It is a distressing thing to be told, "I don't agree, and his father doesn't, with giving injections". The unfortunate position arises that an outbreak of diphtheria occurs with one or two deaths then there is a rush for immunisation, but it is then too late as a period of two or three months from the time of injection is necessary before immunity developes. Present freedom from the disease, though welcome, cannot be relied upon to continue unless 100 per cent. of children receive treatment.

Isolation Hospital

74 cases were admitted during 1947. They were admitted on account of the following diseases:-

Of these 31 cases were admitted from the Hospital Area namely, the Borough (23), and Newark Rural District (6).

The cases from outside the area came from the following Districts:-

Laboratory

The Laboratory at the Public Health Department has again been well used in 1947, the following work having been carried out:-

	To	tal	Posi	tive	Nego	ative.
	1946	1947	1946	1947	1946	1947
Swabs examined for	r					1717

Sputum examined for	r					2 1
Tub. Bac		31	4	5	37	26
Other specimens ex-	-					20
amined	. 6					

Rodent Infestation

The work of this section of the Department continued with full vigour throughout the year. The Block System of destruction of rats was carried out with good results and little opposition from householders was encountered. No payment from tenants was required which was a considerable factor in the success of the operation.

As mentioned in the report for 1946, the first initial treatment of sewers throughout the Borough was commenced in December, 1946, and completed (after delay by flooding) in 1947. A second complete treatment was also undertaken. It is impossible to estimate the number of rats destroyed but there is evidence that the treatments were successful. The number of manholes which gave "no take of bait" at the third treatment (1948) was in itself sufficient to indicate good results but in addition it was found that surface infestations had been considerably reduced in areas where previously surface control had proved disappointing.

At the end of the year the Rodent Officer resigned and to tighten the co-operation between the Rodent Service and the Sanitary Officers it was decided to put the Chief Sanitary Inspector in charge. It is essential that these two sections of the Department work in close contact as defective drains and accumulations of waste matter, the elimination of which is the duty of the Sanitary Section, are the main causes of surface rat infestation. This arrangement has worked well.

The work carried out is shown on the appropriate table.

Water Supply

The water supply was satisfactory in quality and quantity. Two stations pump water from the "Bunter Sand Stone" a deep supply of water of excellent quality. The original station is at Farnsfield in Southwell Rural District. The second pumping station is in Clay Lane within the Borough.

The annual quantity recorded as supplied to the Borough in 1947 was :-

Bacteriological and chemical analyses were carried out quarterly. The samples were taken from household taps, i.e. after chlorination, and all were reported as bacteriologically and chemically suitable for all domestic uses.

The water is not liable to have plumbo solvent action.

The proportion of the population supplied from mains direct to houses was 80 per cent., and by means of stand pipes was 20 per cent.

Vermin Control

The use of D.D.T. and Gammexane has again proved very efficient in the treatment of premises infested with vermin, and this year, no second treatment was necessary.

HOUSING

Repairs are still difficult to obtain. In practically all cases, trouble has not been unco-operative owners, in fact very much the reverse, owners have in some cases requested any assistance the Department could give. As before, the difficulty has been the shortage of the materials required for the repairs.

In this connection the scarcity of certain types of W.C. pedestals is worthy of note. In Newark there appears to be an unusually high proportion of ground floor W.Cs., all of which, by virture of their location, use the S-trap pedestal. These appliances suffered severely in the frost of the 1946-47 winter, and the difficulty experienced, indeed, still being experienced, in obtaining replacement pedestals is unbelievable.

With regard to the shortage of lead, it has been very fortunate that repairs, required to roof and lead work, during the past year have been at a minimum. The difficulty with regard to defective plumbing has been satisfactorily and speedily overcome by the use of copper.

A major difficulty with regard to out-door W.Cs., would appear to be the personal lack of foresight on the part of the occupiers in not taking normal and common sense frost precautions.

In spite of the difficulties, however, 136 houses which were not in all respects fit for human habitation, have been made fit as a result of informal action.

Housing Act, 1936, Part IV.—Overcrowding

Owing to the constant movement of the population it has not been found possible to keep an up-to-date record of overcrowding, but all serious cases are noted.

In view of the acute housing shortage at the present moment, little action can be taken to remedy any but the most serious cases.

FOOD INSPECTION

Strict supervision has again been kept on all foodstuffs, particularly at the Ministry of Food Slaughtering Centre, where a detailed inspection has been made of the carcases of all animals slaughtered. As the figures show the number of animals slaughtered is lower than the previous year when over 10,000 animals were dealt with but the number of total condemnations is higher due in the main to the poor quality of animals which were received chiefly from collecting centres other than Newark.

Of the 9,024 carcases inspected, 148 were found to be totally unfit for human consumption, a percentage of 1.6 of all carcases examined. In addition 12,243 lbs. of general foodstuffs have been found to be unfit for human consumption and have been either destroyed or salvaged for animal feeding. This figure is over 3,000 lbs. higher than the previous year due to the release of large quantities of canned foods which had been stored for use by the services. A considerable amount of these canned foods had been inspected at the Ministry's reconditioning depots and issued to retailers but on inspection by your officers were found to be unsound. A notable cause appeared to be due to the expiration date of the warranty stamped on the cans having been passed in some cases by as much as 2 years.

J. CATLOW

Chief Sanitary Inspector.

Public Health Department The Friary Appleton Gate Newark

August, 1948

To the Chairman and Members of Southwell Rural District Council

Sir, Ladies and Gentlemen.

I have the honour to present my Annual Report on the sanitary circumstances, health, and vital statistics of Southwell Rural District for the year 1947.

In accordance with the Ministry of Health Circular 13/47 the Report is again an Ordinary Report and abbreviated.

The health of the District was satisfactory throughout the year, and no serious epidemic was reported.

The new establishment of Sanitary Inspectors was completed in September, 1947, viz. the appointment of 2 additional Inspectors, bringing the staff to one Senior and three additional Inspectors.

The duty of licensing building work throughout the District again took up a considerable amount of time of the Senior Inspector, and the department clerk. The clerical work involved in this and in routine public health services, is indicated by the number of letters despatched during the year viz.:-3191. In order to relieve the strain I recommended the appointment of a shorthand typist and this was agreed. The appointment was made on 1st February, 1948.

Housing conditions were a cause of anxiety as usual. Information gained in the Housing Survey and facts elicited from applications for Council houses showed that much requires to be done, but the difficulties of material, labour and finance make the repair and improvement of houses, especially of the category 5 type, almost impossible.

Probably the most outstanding event from the public health point of view, was the receipt and consideration of the Consulting Engineer's Report on Sewage, Sewage Disposal, and Water Supplies. This report indicates the need for improvement, and suggests alternative means of dealing with extensions, etc. Undoubtedly the carrying into effect of the proposals will take time, but with steady application, it can proceed part by part, and the final result should be a credit to the Council.

In February, severe flooding was experienced in several of the riverside parishes, and the Council Staff worked energetically to give all possible assistance in the flooded areas. Soap and disinfectant were taken round the villages and issued to occupiers of flooded houses to give an opportunity of carrying out adequate cleansing.

In addition the Sanitary Inspector's Staff gave considerable help in issuing gifts so kindly supplied by the British Red Cross Society.

For the first year on record, no case of diphtheria was notified in the District. This clearly indicates the benefits of immunisation and should — but won't — stimulate the laggard parents.

I desire to record my appreciation of the continued interest in health shown by the Members of the Council, and to thank the staff of the Department, and my colleagues in other Departments, for their ready help and co-operation.

I am,

Your obedient Servant G. G. BUCHANAN

Notes on Vital Statistics

Births. Live births increased from 676 to 725 giving a birth rate of 20.5 per 1,000 of the estimated resident population, compared with 19.6 in 1946. This rate is the same as the corresponding rate for England and Wales.

Illegitimate births (live and still) decreased from 47 in 1946 to 37 in 1947.

The number of still births increased from 11 to 20.

Deaths. There was a small increase in the total number of deaths from 379 to 385.

The increase in male deaths was 41 with a decrease in female deaths of 35.

It is worthy of note that no death of a woman from childbirth was recorded. The death rate of infants under 1 year of age rose from 37.4 to 42 per 1,000 births.

GENERAL PROVISION OF HEALTH SERVICES FOR THE AREA

Treatment Centres and Clinics

The Treatment Centres and Clinics in the District are maintained by the County Council. These are set out below:—

School Clinics

Bilsthorpe, Village Hall

Tuesdays 9.30 a.m. to 12 noon Fridays 2.0 p.m. to 4 p.m.

Medical Officer attends Tuesdays.

Clipstone, Church Hut

Tuesdays 9.30 a.m. to 12 noon Fridays 9.30 a.m. to 12 noon

Medical Officer attends Fridays

Ollerton, Methodist Chapel

Tuesdays 9.30 a.m. to 12 noon Fridays 2.0 p.m. to 4 p.m.

Medical Officer attends Fridays

Southwell, 45, King Street

Thurs. 9.30 a.m. to 12 noon

Medical Officer attends

Dental Clinics

Blidworth, Methodist Hall
By appointment only

Bilsthorpe, Village Hall
Every Tuesday, 2.0 p.m. to 4.30 p.m.

Clipstone, Church Hut

By appointment only

Ollerton, Methodist Hall
Every Thursday, 2.0 p.m. to 4.30 p.m.

Southwell, 45, King Street

Every Tuesday, 9.30 a.m. to 12 noon

Edwinstowe, Church Hall
By appointment only

Ante-Natal Clinics and Child Welfare Centres.

School

Ambulance Service

Cases of infectious diseases were transported to hospital by Newark Borough Fever Ambulance and on a few occasions by the ambulance attached to Mansfield and Worksop Isolation Hospitals

when cases were being admitted to these.

This will be the last year of a service dependent to a large extent on voluntary work and voluntary subscriptions. The abandonment of voluntary service in many spheres seems to be a further step towards everyone looking to the State and Local Government Departments for assistance and the loss of our world famed British independence.

Infectious Diseases

Scarlet Fever

The number of cases of Scarlet Fever dropped from 104 in 1946 to 66 in the year under review. The cases were generally spread throughout the district and over the whole year. The type of disease was mild and undoubtedly cases occurred which were never ill enough for the medical attendant to be called and were in all probability never confined to bed.

Diphtheria

This is a record year for the District — the first in which no case of diphtheria was notified. Reference to the table of infectious diseases shows clearly the result of our immunisation work. Immunisation commenced in 1941 when 22 cases were notified. In 1942 the number dropped to 8 and since then has steadily decreased.

During the year 613 children received injections:-Children under 5 years of age 525 Children 5—15 years of age 88

613

In addition 342 boosting doses were given.

Unfortunately this absence of diphtheria is not good propaganda although in reality it should be. Parents are apt to think that as there is no diphtheria in the locality there is no need for immunisation. But cases are occurring in other districts and carriers can easily convey the germ and so light up an outbreak in any place with a large proportion of unimmunised children.

The responsibility for immunisation of pre-school age children was transferred to the County Council, but the actual work was continued as before, the County Council reimbursing the District Council the financial outlay involved. School children remained the responsibility of the District Council but will be transferred to the County Council under the National Health Service Act.

Close co-operation with the staff of the County Medical Officer continued and the help given both in propaganda and at clinic sessions

were greatly appreciated.

Acute Poliomyelitis and Encephalitis

Between August and December 6 cases of Infantile Paralysis were notified — 3 poliomyelitis and 3 polioencephalitis. There was one death.

The cases occurred at :-

Blidworth 2 (1 encephalitis, 1 myelitis)

Ollerton .. 1 (myelitis)
Eakring .. 1 (myelitis)
Hockerton .. 1 (encephalitis)
Southwell .. 1 (encephalitis)

No permanent paralysis resulted in any of the cases. All the cases were admitted to hospital where the diagnosis was confirmed and contacts were visited for instructions and observation. No contact of a known case developed the disease.

Measles and Whooping Cough

Sporadic small outbreaks of these diseases occurred throughout the district.

Infestation

The number of cases of scabies reported was 33, a reduction of 3 on the previous year. All cases were visited and home inspections made with a view to the family being treated. Benzyl Benzoate applications was the method of treatment and in no case was it found to be necessary for the disinfestation of clothing or bedding to be carried out. Adults and the parents of children infected were only too pleased to carry out instructions in order to be rid of the nightly distressing itching.

Head infestations by the louse were treated by Lethane Hair Oil. Unfortunately the oily nature of this with the somewhat unpleasant smell makes it looked upon with disfavour by older school girls and their elder sisters.

The supply of steel combs was continued by the Education Authority and close co-operation between the county school health service staff and that of the district council was maintained.

Housing

The task of endeavouring to ensure at least the weather proof condition of dwellings was continued with doubtful success. A considerable proportion of the poorer type houses are now beyond the stage of repair. The only method of making them weather proof is demolition and rebuilding, a method at present impossible.

The Rural Housing Survey had to be much curtailed during the first part of the year owing to lack of staff. After the appointment of Sanitary Inspectors in September, however, it was resumed and the

results are detailed in the Sanitary Inspector's Report. The nearer completion this survey becomes, the more it becomes obvious that at the earliest possible moment much work must be done to improve housing conditions.

In this district the call to the mines caused an amount of overcrowding in the colliery villages. In many cases it was not "Technical" overcrowding because under the Housing Acts, living accommodation is included when calculating the permitted number of occupants of a house.

Lack of housing accommodation is one of the causes of a lowered birth rate. Perusal of housing applications indicates a very large number of young married couples who are unwilling to have a family under their present conditions — living in rooms or with parents and often in dwellings unfit in which to bring up a young family.

Prefabrication appears to be a means of producing a more rapid construction programme. The present "prefab" is relatively satisfactory for immediate temporary needs but not for permanent requirements. The type suggested is that built from factory made sections of reasonable size which can be erected on the site and the size and layout of the building varied.

With the recent raising of the amount allowable without permit for building and repair work from £10 to £100 the hope of further decontrol becomes greater. Financial consideration will unfortunately probably curtail the money available for carrying out any major repair work especially in those houses where the rent is controlled and makes expenditure uneconomic.

Water Supply

The water supply to the District generally was satisfactory in quality and quantity. There were of course, dwellings beyond the range of a piped supply where quality and quantity were not up to a required standard and where difficulty was at times experienced. This is bound to occur in rural districts unless an enormous expenditure is made on a closely linked network of supply pipes.

Routine bacteriological and chemical analysis of public supplies were made throughout the year, with in addition similar analysis of private well supplies where considered necessary.

The unsatisfactory sample was considered to be bacteriologically infected from domestic fittings. A repeat sample a few days later was found to be satisfactory.

Private wells—5 — All unsatisfactory.

A table showing the direct and stand pipe supply situation in each parish is included in the Sanitary Inspector's report.

Halloughton	Hoveringham	Kelham	Kirton
Lowdham	Ollerton	Oxton	Rolleston
Rufford	Southwell	Staythorpe	Thurgarton
Upton	Walesby	Wellow	

In the undermentioned Parishes collection of household refuse is carried out by contract:-

Bilsthorpe Carlton-on-Trent Clipstone Eakring
Farnsfield Sutton-on-Trent

A monthly tin collection is made in the remaining Parishes by Council Staff.

The emptying of Cesspools is undertaken in the Parish of Blidworth.

The Council have Tips in the following Parishes:-

Blidworth Clipstone Bilsthorpe Rufford (2) Kelham Walesby Southwell Gunthorpe

The cost of collection and disposal in the various areas is as follows:-

Area		Approximate No. of premises	Approximate cost of scheme
Blidworth Area (1 Parish) Southwell Area (3 Parishes) Ollerton Area (7 Parishes) *Lowdham Area (6 Parishes) *Bleasby Area (10 Parishes)	• •	1864 1314 2907 939 841	£14,065

^{*} Scheme commenced 2/5/47 (Lowdham); 8/9/47 (Bleasby).

The following number of receptacles were emptied during the year:-

Area	Ashbins	Ashpits	Pails	Cesspools	Loads
Blidworth	83,002	108	2,587	235	1,069
Southwell	 32,285	25	10,658	-	609
*Bleasby	 13,484	85	2,623		438
*Lowdham	 25,633	40	16,568		587
Ollerton	 105,336	187	13,808		1,615

^{*} Scheme commenced 2/5/47 (Lowdham); 8/9/47 (Bleasby)

Hydrogen Cyanide (Fumigation of Buildings) Regulations, 1938

One lot of buildings was treated with Hydrogen Cyanide during the year, and the necessary conditions were observed by the fumigators.

Salvage

I give hereunder details of the materials collected in the District during the year ended 31st December, 1947.

Water Supply

All the 55 Parishes in the Rural District are supplied with a good nd wholesome supply of piped water.

Seventeen samples of water from the Public supplies (after treatment) were taken during the year, and submitted for bacteriological and chemical analysis. No samples of raw water were taken.

The reports of sixteen of the samples stated that at the time of sampling the water was of satisfactory bacterial and chemical quality for human consumption, domestic use and dairy purposes.

The report of the remaining sample stated that the water was of barely passable bacterial quality for human consumption and domestic use. The deterioration in bacterial quality of this sample appeared due to dirt on the domestic fittings. A second sample taken a few days later was found to be satisfactory.

All the public supplies are chlorinated and none are liable to have plumbo-solvent action.

The number of houses connected to the Council's main supply during the year was 132.

No main extensions were carried out during the year.

received		• •				400 (
Number of	Licences gran	ted	•			808

Conclusion

During the year the provision of two extra Sanitary Inspectors enabled the Rural Housing Survey to be proceeded with, and also more attention could be paid to routine inspections. With the proposed additional accommodation and short-hand typist it is hoped to put the Department on a sounder working basis than has been possible hitherto.

Finally, may I thank the members of the Council and the staff of other Departments for their assistance during the year.

B. D. HALL

Chief Sanitary Inspector

Public Health Department The Friary Appleton Gate Newark

August, 1948

To the Chairman and Members of Newark Rural District Council:-Sir, Ladies and Gentlemen,

I have the honour to present my report on the vital statistics, health and sanitary circumstances of Newark Rural District for the year 1947.

The provision of a piped water supply to all parishes continued to be given constant consideration. The scheme for the northern parishes has been given approval and it is hoped that commencement of the work will not be delayed. At the time of writing the southern scheme is still awaiting Ministry approval.

I desire again to draw the Council's attention to the necessity of considering sewerage schemes. The provision of these will be required urgently when the pipe water supplies become available.

In this District also, severe flooding took place in several parishes, and I wish to record appreciation of the work of Mr. Earnshaw in dealing with the conditions. He organised 'carted water supplies', and methods for the disposal of night soil etc., and willingly gave up his own spare time in giving whatever assistance he could.

The health of the district has been good from the public health aspect, with no serious outbreak of infectious disease. The total absence of diphtheria has been a noteworthy feature.

I record my thanks to the Members of the Council for the interest in Public Health and to the Clerk for his willing help throughout the year.

Iam

Your obedient servant

G. G. BUCHANAN

(Note.—Figures given in brackets are corresponding figures for England and Wales).

Notes on Vital Statistics

Births. The number of births increased from 182 to 216 giving an increased live birth rate of 20.5 vice 17.8. The number of still births remained at 10.

Deaths. Deaths increased from 111 to 124, and the death rate rose from 10.9 to 11.7. This is very slightly below the rate for England and Wales. Twenty of these occured in persons between 80 and 90 years of age and three in over 90.

One woman died as the result of childbirth.

The number of infants who died within 1 year of birth was 11, an increase of 4 on the corresponding figure for 1946. Of these, none was illegitimate.

GENERAL PROVISION OF HEALTH SERVICES FOR THE AREA

Treatment Centres and Clinics

Child Welfare Centres

Five Child Welfare Centres are maintained in the District by the County Council:-

Balderton Collingham Farndon Wigsley Kilvington

Sessions are held as follows:-

Balderton, Bullpit Lane ... Thursday weekly ... 2 to 4.30 p.m. Collingham, Public Hall ... Tuesday fortnightly ... 2 to 4.30 p.m. Farndon, Methodist Hall ... Wednesday fortnightly... 2 to 4.30 p.m. Wigsley, Methodist Chapel Wednesday fortnightly... 2 to 4.30 p.m. Kilvington, Women's Insti- Wednesday fortnightly... 2 to 4.30 p.m. tute

Ante-natal Clinics are held monthly at Collingham, Farndon and Wigsley (fortnightly at Kilvington) during the Medical Officer's Session at the Child Welfare Centre.

At Balderton a separate session is held monthly on Friday, from 9.30 a.m. to 12 noon.

School Clinics

A School Clinic is conducted by the County Council at Balderton, Bullpit Lane. Sessions are held weekly on Thursday from 9.30 a.m. to 12 noon.

Infectious Disease

No serious outbreak of infectious disease occurred during the year under review but two cases of Infantile Paralysis were notified. The first case was reported on 30th August — a boy aged 4 years. He was admitted to Derby Isolation Hospital and the diagnosis confirmed. This was an abortive type of the disease and no paralysis developed. The second case was a man who was first seen by his doctor on the 17th September and arrangements made for his admission to hospital. Unfortunately, paralysis developed very rapidly, and he died from respiratory failure before arrival.

No case of diphtheria was notified during the year.

Seventeen notifications of Pulmonary tuberculosis were received. This was an increase of 5 over the number for 1946 and the highest recorded during the past ten years. All except 3 occurred in the age groups between 20 and 45.

Four cases of non pulmonary tuberculosis were notified against nil in the previous year.

Immunisation against diphtheria was continued and the number of children who received the necessary injections was :-

Under 5 years of age—151 Over 5 years of age—16

In addition "Boosting" doses were given to 63 school children.

Isolation Hospital

Cases of infectious disease were treated in the Borough Isolation Hospital in accordance with previous arrangements. All cases admitted during 1947 were suffering from Scarlet Fever. The number was 6.

Infestation

Five cases of scabies were reported. Of these three were in one family. Home visits were made by the Medical Officer of Health and treatment by Benzyl Benzoate application instituted on a family basis.

Louse infestation was treated with Lethane Hair Oil. Throughout the year close co-operation was maintained with the County Medical Officer's staff.

Water Supplies

The parishes of Collingham and Langford are supplied by a bulk supply from Newark Borough and those of Balderton, Coddington, Farndon, Hawton and Winthorpe are within the Statutory supply area of Newark Borough.

In these parishes the following numbers of houses with or without a piped supply are as follows:-

	With	Withou!
Collingham N.	 259	51
Collingham S.	 156	54
Langford	 21	12

Newark Statutory Area:-

			With	Without
Balderton	• •		1031	187
Coddington			87	81
Farndon		• •	257	85
Hawton			9	19
Winthorpe		• •	34	30

In addition to the above piped supplies, a few farms in the parish of Thorney have been permitted to tap the main belonging to the Air Ministry.

The remaining parishes are at present dependent on supplies from shallow wells, a feature which it is hoped will be changed within reasonable time.

Housing

The Rural Housing Survey continued during the year. The results of the Survey are set out in the report of the Sanitary Inspector. Work in connection with building and repair licences again absorbed much of the time of the staff which should have been devoted to inspections.

New Housing schemes were dealt with as rapidly as possible but unfortunate delays occurred much against the wishes of the Council and Officers. Application for new houses far exceeded the supply and it was with considerable difficulty that the appropriate Committee made the allocations. So far no one has been able to produce the perfect points system which will please all applicants.

		Informal notices issued	1	

Meat and Other Foods Inspection

Centralised slaughter remains in operation and all food animals slaughtered for the purpose of sale are dealt with in the Borough of Newark.

Routine inspections of butchers' shops and preparing rooms have been made during the year.

The following foodstuffs were condemned and voluntarily surrendered:-

50-lbs. bacon — affected by decomposition.

Refuse Collection and Disposal

The scheme continued to operate as hitherto until the 1st July when the whole scheme was reorganised, and with an additional lorry and a team of three men, every village in the Rural District, with the exception of Farndon, was provided with a fortnightly collection of household refuse and the villages of Collingham and Balderton were served by a weekly collection of pail closets.

The weekly collection of household refuse and pail closets by contract continued at Farndon as before.

The disposal tips at Farndon and Collingham are almost completed and accordingly two new tipping grounds are required almost at once; a strong reminder that from now onwards a succession of tipping grounds will be required in both Northern and Southern parts of the District.

The introduction of the new collection scheme on the 1st July brought an immediate improvement in the recovery of paper salvage as shown:-

January — June ... 3 tons 5 cwts.

July — December ... 12 tons 5 cwts. 3 qrs.

Sewage Works Effluents

In an effort to improve the standard of effluent from the Balderton works, some work was undertaken to secure more efficient sludging of the main tanks.

For a short time we had the satisfaction of receiving reports of samples taken by the County Rivers Inspector, classified as "Good".

The works are overloaded to such a degree, however, that satisfactory effluents are not likely to be maintained.

Water Supply

The villages of North and South Collingham, Langford, Winthorpe, Coddington, Balderton, Hawton and Farndon are served with mains water supplied by the Borough of Newark.

The remaining parishes depend upon surface wells.
